Remark:The above datas are theoretic ,please reference the actual datas if there it differs.

Information:

Material: SUS302, 304, 304L, 316, 316L, etc.

Specification: 1x1-635x635 mesh (0.02-23mm)

Width: 1 meter, 1.22 meters, can be customized

Roll length: 30 meters, can be customized

Weaving method: Twill weave, mat twill weave

Advantage:

1. The filtering effect is very stable: high-quality raw materials are selected in the process of production, so that it is not easily deformed during use;
2. High strength: high-quality materials have high pressure resistance and can withstand large working strength;
3. The cleaning is simple: the single layer of filter material has the characteristics of simple cleaning, especially suitable for backwashing;
4. With high temperature resistance: can withstand high temperatures of about 480°C;
5. With corrosion resistance: stainless steel raw materials themselves have high corrosion resistance and wear resistance;
6. Easy to process: high-quality materials, whether it is cutting, bending, stretching, welding and other procedures can be done very well.

Application:

1. For screening and filtration under acid and alkali conditions.
2. The petroleum industry is used as a mud net, a chemical fiber industry as a sieve screen, and an electroplating industry as a pickling net. 3. Used in the industrial and construction industries to screen sand and filter liquids and gases.
